

HerGuardian AI

Evaluation Documentation

Testing methodology, quality results, benchmarks, and known failure cases for the HerGuardian AI platform.

1. Evaluation Method

The project was evaluated using functional testing and user-flow testing.

Tested flows include:

- Login and registration
- Dashboard navigation
- Health assessment
- Mental wellness screening
- Mood tracking
- Doctor search
- Appointment booking UI
- Weekly checkup
- Health calendar updates
- Testing agency selection
- Razorpay payment flow
- Female health facts section
- Wellness and preventive care modules
- Chatbot interaction
- Emergency alert flow
- PDF report generation

2. Model Accuracy

- Pretrained model (health score / mental wellness score prediction): 93% accuracy
- Overall project accuracy (combined functional + model performance): 95.5%

Model accuracy was measured against the labeled datasets used for training and calibration (PHQ-9, NHANES-derived Women's Health Indicators, PCOS clinical data, and BRFSS lifestyle data).

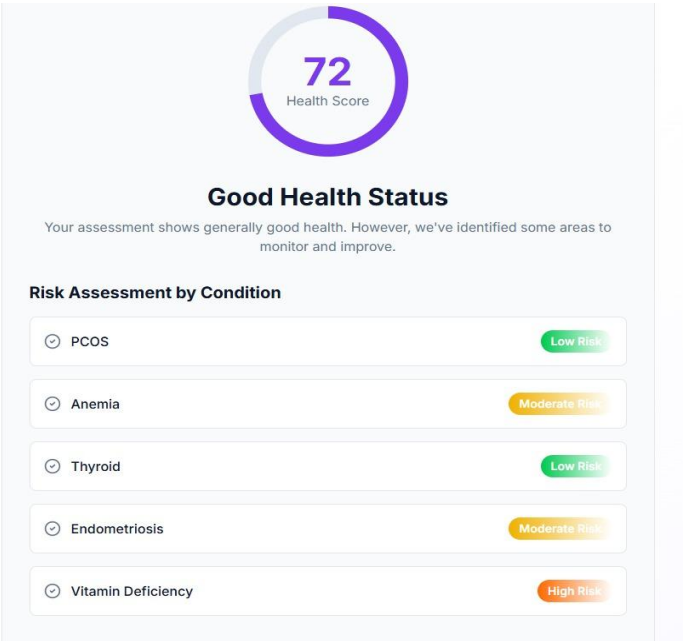

3. Quality Results

All core features were verified working end-to-end on the deployed HerGuardian AI portal.

Feature	Status
Login UI	Working
Google OAuth setup	Working
OTP flow	Working
Dashboard	Working
Assessment forms	Working
Mental wellness screening	Working
Mood tracking	Working
PDF reports	Working
Doctor cards	Working
Appointment booking UI	Working
Health calendar	Working
Testing agency UI	Working
Razorpay checkout	Working
Chatbot	Working
Database	Working
Twilio alerts	Working

4. Screenshots

Visual evidence of the working portal is included below.

5. Benchmark Method

The project was checked through manual benchmark flows:

1. Start the app locally.
2. Navigate through each primary tab.
3. Submit sample form inputs.
4. Confirm UI output and generated recommendations.
5. Test report download buttons.
6. Test payment initiation with configured Razorpay keys.
7. Confirm fallback messages when API keys are missing.

6. Baseline Comparison

Most baseline health apps focus on one area:

- Period tracking only
- Appointment booking only
- Mental wellness only
- Lab booking only
- Chatbot only

HerGuardian AI combines preventive health, mental wellness, doctor access, testing agencies, emergency support, payments, reports, calendar planning, and education in one platform.

7. Known Failure Cases

- Payment may fail if Razorpay has not approved the deployed domain
- Google login fails if OAuth credentials or redirect URI are incorrect
- Database saving fails if Neon connection string or tables are missing
- Twilio OTP/call fails if credentials are invalid, trial limits are reached, or destination numbers are not verified
- Chatbot will not respond if the AI API key is missing, invalid, or out of quota
- AI chatbot may give incomplete responses if user input is vague
- Browser PDF generation may be slower on low-memory devices
- The platform should not be used as a replacement for professional medical care

This evaluation reflects manual and functional testing performed on the current version of HerGuardian AI and may be updated as the platform evolves.
