

# HerGuardian AI

## Privacy & Safety Documentation

*Data handling, storage, permissions, and safety practices for the HerGuardian AI platform.*

---

### 1. Data Handling

*The application may collect the following categories of user information:*

- Name and email address
- Mobile number
- Login information
- Health assessment responses
- Mood logs
- Appointment data
- Calendar data
- Testing preferences
- Chatbot queries
- Payment metadata
- Emergency contact details

### 2. Storage

*Collected data can reside in the following locations, depending on configuration:*

- Browser state or local storage, where applicable
- Neon PostgreSQL database
- External service dashboards such as Twilio, Razorpay, Google OAuth, and AI provider logs

### 3. Permissions

*The application may request or use the following permissions and integrations:*

- Google OAuth for login
- Phone number for OTP verification and alerts
- Payment details through Razorpay
- Contact details for emergency alerts
- Internet access for external health resources and AI chatbot responses

## 4. Safety Position

HerGuardian AI is designed to provide screening support, health education, preventive guidance, and timely awareness for women's wellbeing.

*The platform focuses on:*

- Helping users understand possible health patterns and risk signals
- Encouraging early conversations with qualified healthcare professionals
- Supporting safer next steps through reports, reminders, and appointment booking
- Promoting preventive care, health literacy, and emergency awareness
- Keeping medical decisions with certified doctors and healthcare providers

When serious symptoms or red flags are detected, HerGuardian AI guides the user toward professional care, emergency support, or booking a doctor appointment through the platform.

## 5. Potential Risks

- Users may enter incorrect or incomplete health data
- The AI chatbot may misunderstand vague input
- External API failures may interrupt OTP, payment, chatbot, or alert flows
- Generated reports are supportive in nature and should be reviewed by professionals
- Sensitive data must be protected using secure database and environment variable practices

## 6. Security Practices

- Environment variables are used for API keys
- Secrets are not committed to GitHub
- Database URLs are protected
- API keys are rotated if exposed
- Production deployment uses HTTPS
- Payment processing is handled by Razorpay
- OTP and alert delivery are handled by Twilio

## 7. Limitations

HerGuardian AI is a preventive support and education platform. It does not replace certified healthcare professionals, emergency services, or clinical judgement as of now.

---

*This document reflects the current data handling and safety approach of HerGuardian AI and may be updated as the platform evolves.*
